## Foreword

The 2014 Myanmar Population and Housing Census (2014 MPHIC) was conducted from 29<sup>th</sup> March to 10<sup>th</sup> April 2014 on a de facto basis. The successful planning and implementation of the census activities, followed by the timely release of the provisional results in August 2014 and now the main results in May 2015, is a clear testimony of the Government's resolve to publish all information collected from respondents in accordance with the Population and Housing Census Law No. 19 of 2013. It is now my hope that the main results both Union and each of the State and Region reports will be interpreted correctly and will effectively inform the planning and decision-making processes in our quest for national and sub-national development.

The census structures put in place, including the Central Census Commission, Census Committees and officers at the State/Region, District and Township levels and the International Technical Advisory Board (ITAB), a group of 15 experts from different countries and institutions involved in censuses and statistics internationally, provided the requisite administrative and technical inputs for the implementation of the census. The technical support and our strong desire to follow international standards affirmed our commitment to strict adherence to the guidelines and recommendations, which form part of international best practices for census taking.

This Main Census Report – Mandalay Region Report (Census Report Volume 3-I) is one of the 15 publications which fall under the third series of census reports to be released from the 2014 MPHIC. It contains detailed information for Mandalay Region on demographic and socio-economic characteristics of the population and households at the State/Region, District and Township level. The initial analysis indicates that generally the 2014 MPHIC data are complete and accurate. The Union information is presented in Census Volume 2 while data for the 15 States and Regions are in their respective reports, all under Census Volume 3. However, census enumeration did not cover some population groups in the northern parts of Rakhine State and in a few areas of Kachin State. In parts of Hpa Pun Township in Kayin State, only the total number of households and population by sex were submitted to the Census Office. This non-enumeration affected the Union Report as well as the reports of the three respective States. The Government, with support from UNFPA, minimised the impact of these incidences as much as possible and estimated the population missed in these areas. The estimates for the population not counted in these areas are published in this report.

On behalf of the Government, I express our gratitude to UNFPA and the development partners, namely Australia, Finland, Germany, Italy, Norway, Sweden, Switzerland, the United Kingdom and the United States of America, for their generous contributions. Their financial, technical and logistical support was critical to the success of our census. They provided useful advice and contributed immensely to various activities, including technical assistance, equipment and materials, printing of questionnaires, training of trainers and enumerators/supervisors, publicity materials and scanning of questionnaires, amongst other activities.

We are greatly indebted to the President of the Republic of the Union of Myanmar, H.E. U Thein Sein, and the Patron of the Central Census Commission, the Vice President of the Republic of the Union of Myanmar, H.E. Dr. Sai Mauk Kham, for their valuable guidance in the census process. Also to be acknowledged are the Chief Ministers in each State and Region who steered the census operations in their areas together with State/Region Directors of Immigration and National Registration, and members of the Central Census Commission and Census Committees at every administrative level who worked

tirelessly to support the census process. Our gratitude also goes to the technical teams at the Department of Population and UNFPA who worked around the clock to ensure that the census was implemented according to the planned timeline, and that all the reports and guidelines were produced and delivered on time. Special appreciation goes to the enumerators, supervisors and trainers who were mainly from the various ministries and other institutions.

Finally, I would like to thank all Myanmar people for their cooperation during the enumeration in particular, and support to the census process in general. I would like to reiterate our promise that the census records are strictly confidential and are being handled with the utmost care, and that they will be used for purposes of statistical compilation only.

H.E. U Khin Yi,

Minister of Immigration and Population

**The Republic of the Union of Myanmar**

## List of Statistical Tables

Table Number	Description
<b>SERIES A: DEMOGRAPHIC CHARACTERISTICS</b>	
A-1	Population by household type, sex and sex ratio by urban and rural (Region, District, Township)
A-2	Conventional households by sex of the head, percent of female headed households, population by type of household and mean household size (Region, District, Township)
A-3	Population by urban/rural and sex; sex ratio and percent of population urban (Region, District, Township)
A-4	Population by urban/rural, sex and single years of age (Region)
A-5	Population by urban/rural, sex and 5-year age groups (Region, District)
A-6	Population by selected age-groups and dependency ratios by urban and rural (Region, District, Township)
A-7	Conventional households by size of the household (Region, District, Township)
<b>SERIES B: SOCIAL CHARACTERISTICS</b>	
B-1	Population in conventional households by relationship to the head of household and sex (Region, District)
B-2	Population in conventional households and institutions aged 10 years and over by marital status, 5-year age group and sex (Region)
B-3	Population aged 15 years and over by marital status, district, township and sex (Region, District, Township)
<b>SERIES C: MIGRATION</b>	
C-1	Former conventional household members living abroad by country of residence, District of reporting household and sex (Region, District)
C-2	Former conventional household members living abroad by country of residence, sex and duration of residence abroad (Region)
<b>SERIES D: EDUCATION</b>	
D-1	Population in conventional households 5 years and over, by sex, literacy and age group (Region, District)
D-2	Population in conventional households 15 years and over, by sex, literacy and urban/rural (Region, District, Township)
D-3	Population in conventional households 5 years and over by sex, school/college attendance and age (Region, District)
D-4	Population in conventional households 5 - 29 years, by sex, school/college attendance (Region, District, Township)
D-5a	Population 5 years and over (including institutions) by highest level of education completed, sex and special age group - urban and rural (Region)
D-5b	Population 5 years and over (including institutions) by highest level of education completed, sex and special age group – urban (Region)
D-5c	Population 5 years and over (including institutions) by highest level of education completed, sex and special age group – rural (Region)

<b>Table Number</b>	<b>Description</b>
D-6a	Population 25 years and over by highest level of education completed and sex (both households and institutions) (Region, District, Township)
D-6b	Population 25 years and over in conventional households by highest level of education completed and sex (Region, District, Township)
D-6c	Population 25 years and over in institutions by highest level of education completed and sex (Region, District, Township)
<b>SERIES E: ECONOMIC ACTIVITY</b>	
E-1a	Population 10 years and over by usual activity status, labour force participation rate, unemployment rate and employment to population ratio by sex and age group (Region)
E-1b	Population 10 years and over by usual activity status, labour force participation rate, unemployment rate and employment to population ratio by sex and age group -urban (Region)
E-1c	Population 10 years and over by usual activity status, labour force participation rate, unemployment rate and employment to population ratio by sex and age group -rural (Region)
E-2	Population 10 years and over by usual activity status and sex (Region, District, Township)
<b>SERIES F: BIRTHS</b>	
F-1	Women in conventional households aged 15 - 54 by children ever born to ever-married women and children dead, by age of mother (Region, District)
F-2	Women in conventional households aged 15 - 49 by number of live births in the last 12 months for ever-married women and number of those newly borns who have died, by age of mother (Region, District)
<b>SERIES G: IDENTITY CARDS</b>	
G-1	Population 10 years and over by type of identity card and age group (Region)
G-2	Population 10 years and over by type of identity card and Urban/Rural (Region, District, Township)
<b>SERIES H: DISABILITY</b>	
H-1	Population in conventional households and institutions by disability prevalence rate, type of disability, sex and age group (Region)
H-2	Population (conventional households and institutions) by disability prevalence rate, type of disability and sex (Region, District, Township)
<b>SERIES I: HOUSING CONDITIONS</b>	
I-1	Conventional households by type of housing unit (Region, District, Township)
I-2	Conventional households by type of ownership of housing unit (Region, District, Township)
I-3	Conventional households by type of toilet (Region, District, Township)
I-4a	Conventional households by main construction material for the roof (Region, District, Township)
I-4b	Conventional households by main construction material for the external walls (Region, District, Township)

<b>Table Number</b>	<b>Description</b>
I-4c	Conventional households by main construction material for the floors (Region, District, Township)
<b>SERIES J: HOUSEHOLD AMENITIES</b>	
J-1	Conventional households by main source of lighting (Region, District, Township)
J-2	Conventional households by source of water for drinking (Region, District, Township)
J-3	Conventional households by source of water for non-drinking use (Region, District, Township)
J-4	Conventional households by main type of cooking fuel (Region, District, Township)
J-5	Conventional households by availability of communication and related amenities (Region, District, Township)
J-6	Conventional households by availability of transportation items (Region, District, Township)

# 1. Introduction

## 1.1. Preamble

In April 2014, the Government of the Republic of the Union of Myanmar conducted its latest Census after more than three decades without a Population and Housing Census. Population censuses were regularly conducted in Myanmar during the colonial era. In the post-independence period, comprehensive population and housing censuses were successfully undertaken in 1973, 1983 and most recently in April 2014. Despite the absence of censuses, several household based surveys such as Fertility and Reproductive Health Surveys, Family and Youth Surveys, Population Changes and Fertility Surveys, among others have regularly been carried out to guide programming and policy development in the country.

Censuses are an important source of benchmark information on the characteristics of the population and households in every country. One unique feature of a census is its ability to provide information down to the lowest administrative level. Such information is vital for planning and evidence based decision-making at every level. Additional data uses include allocation of national resources; the review of administrative boundaries; the positioning of social infrastructures such as schools, health facilities, and roads; and research. In addition, a census provides a rich source of data for monitoring national and international development initiatives, including national development plans, the Millennium Development Goals (MDG), and the International Conference on Population and Development (ICPD). This meant it was imperative for Myanmar to conduct the 2014 Population and Housing Census (2014 MPHC).

The 2014 MPHC results are being released in three phases comprising several publications. Phase one was the publishing and launch of the provisional results (Census Volume 1) in August 2014. Phase two is the publishing and launch of the main results in May 2015, comprising two series of publications: Census Volume 2, which contains detailed information at the Union and State/Region levels, and Census Volume 3, which includes a report for each of the 15 States and Regions in Myanmar. The publication of main census results that require manual coding and further consultations is planned for early 2016. Phase three of the publications will be the thematic analysis reports on the numerous themes covered in the census.

**The present report is one of the 15 State and Region specific reports of the Census Volume 3 publications. This report contains the main results for Mandalay Region.**

The definitions of terms and concepts used in this publication and in the census process are contained in the Glossary of Annex 2.

## 1.2. The 2014 Population and Housing Census

### 1.2.1. The Management and Planning

The Department of Population (DoP) in the Ministry of Immigration and Population, is responsible for the management, planning and implementation of the 2014 MPHC. The Population and Housing Census Law No. 19 of 2013 mandated DoP to collect information during censuses from every person, household and/or establishment. Through the Law, census committees and offices were created to facilitate the successful implementation of the planned census activities at every administrative level in the country. At the State and Region level the Chief Minister, as chairperson of the State/Region Census Committee, was responsible for the implementation of all census activities.

Planning for the census started in 2011 with assessments of the main components of the entire census taking process. Assessments were undertaken in mapping, data processing, risks associated with census

taking, resource requirements, questionnaire development, communication publicity and advocacy, and lastly, analysis, publication and dissemination of results. These assessments were used to compile the Census Project Document, which guided the implementation of the entire census process.

### **1.2.2. Enumeration Area Mapping**

The process of preparing census enumeration area (EA) maps began in June 2012. Township Immigration Officers who prepared the maps were trained on the objectives of the census, the roles of maps in the census process, concepts of sketching maps at Township and ward/village tract levels, and plotting new landmark features on the maps. After concatenating all the topographical sheets that make up the entire country, maps of each of the 330 Townships were printed and distributed to the respective Township Immigration field offices. The Township Immigration Officers then collected information on the total number of households and the population of institutions in each ward and village tract. The information was used to delineate enumeration areas where each enumerator was to be assigned. Maps were drawn for over 16,000 village tracts and wards. In total, 81,750 enumeration areas were identified, covering almost the entire country. In a few areas in Shan, Kachin and Kayin States, it was not possible to prepare maps using this methodology; instead sketch maps were prepared using satellite imagery.

### **1.2.3. Development of Questionnaires and Manuals**

The development of Census questionnaires and field instruction manuals started in July 2012. The process took into account data needs in the country based on consultations with data users, the Principles and Recommendations of the 2010 Round of Population and Housing Censuses, and past experiences of censuses in Myanmar and the ASEAN region.

A household questionnaire was designed to ascertain the number of persons in conventional households on 29<sup>th</sup> March 2014 (Census Night) and to collect demographic, social and economic data. Questions on housing conditions and amenities were also included in the questionnaire. Questions on former household members living outside Myanmar and household members who had died during the 12 months before Census Night were also included. In total, the questionnaire contained 41 questions (Annex 1).

An institution questionnaire containing 11 questions, which were selected from the household questionnaire, was used to collect data on persons in institutions such as hospitals, hotels, prisons, monasteries and boarding schools, as well as the floating population, which included out-door sleepers and those who were at the sea-ports on Census Night.

### **1.2.4. Recruitment and Training**

Almost all field Census personnel were teachers, recruited by the Ministry of Education and Township Census Committees. The assignment of enumerators to the areas where they were to collect data was based on two main factors: language spoken and familiarity with the people in the area.

Training of field personnel was cascaded into four levels. A team of experts in census and survey implementation was drawn from UNFPA, the Australia Bureau of Statistics, the Registrar and Census Commissioner's Office in India, DRS Ltd, the Department of Population (DoP) and the Department of Social Welfare. The team reviewed the training materials and developed a comprehensive training programme. The team trained core trainers, primarily from the Ministry of Immigration and Population and the DoP. The core trainers trained the master trainers who were mainly from universities and other government departments. The master trainers then conducted similar trainings for a team of carefully selected District trainers. These were senior teachers at the State/Region and District levels. The District trainers then proceeded to train Supervisors and Enumerators at each Township headquarters.

All cadres of personnel were trained for five days. For Supervisors an additional day was added to take them through their roles, field operations, re-interviews, checking for errors in completed questionnaires, and communication and management skills.

### **1.2.5. Census Enumeration**

The enumerators and supervisors reported to their respective EAs at least two days before the start of the census. The days before the start of the enumeration were used to identify enumeration area boundaries, check structures and households within each EA, and update information on EA maps and structure listing forms in instances where this was necessary.

The census enumeration aimed to count all persons who were within the borders of Myanmar on the night of 29<sup>th</sup> March 2014 (Census Night). To achieve this, Township Census Officers, with support from the committees, made arrangements to ensure that the enumeration of the population in the three key institutions (hotels, hospitals and police/prison cells) was undertaken on Census Night. The enumeration of the population was satisfactorily completed in almost all States and Regions within the planned 12 days.

### **1.2.6. Data Processing**

Data processing is a crucial and integral part of post-enumeration census activities. Specifically, it involves data capture, coding, editing, and analysis. The 2014 MPHIC took full advantage of advances in technological developments in the implementation of data processing. While a variety of methods are available for capturing data of population and housing censuses, DoP opted for the Optical Mark Reader/ Intelligent Character Recognition/Key-in from Image (OMR/ICR/KFI) scanning technology after intensive evaluation.

The census questionnaires were specially designed and enumerators intensively trained to enhance the efficiency of the scanning system, which could process questionnaires more quickly and with fewer staff compared to other options considered. The scanning system functioned well and by early October 2014 all the estimated 11.5 million forms had been captured.

### **1.2.7. Independent Observation Mission**

An independent team of international and national observers carried out an observation mission of the enumeration in all the States and Regions. The objectives of the observation mission were to: a) document the census process, particularly the way in which data were collected in selected Townships and Enumeration Areas; b) provide feedback to the Government during and after the enumeration; c) objectively assess the exercise against international standards and national legislation; and d) document lessons learned and good practices to improve the Government's capacity to conduct future censuses.

The observers visited all the 15 States/Regions of Myanmar, 41 Districts (55% of the total), 121 Townships (37% of the total) and 901 Enumeration Areas (1.1% of the total). They observed 2,193 interviews across the country. At the end of the census enumeration, a report was published with the findings from the observation mission. This is available at: <http://countryoffice.unfpa.org/myanmar> and <http://www.dop.gov.mm/>.

### 1.2.8. Provisional Results

The 2014 MPHC provisional results were published and launched on 30 August 2014 by the Minister of Immigration and Population. The report presented the size of the population by sex at Union, State/Region, and in a few cases at District and Township levels. The provisional results publications are available online at <http://countryoffice.unfpa.org/myanmar/?publications> and <http://www.dop.gov.mm/>

### 1.3. Quality Assurances to improve data quality

The planning and implementation of the 2014 MPHC took into consideration a number of strategies and activities to ensure and improve the quality of the overall census process and particularly the quality of the data. These steps were to ensure that the coverage was as complete as possible and that at the same time the information given by the respondents and transcribed by the field personnel and the Census Data Processing Centre was as accurate as possible. Some of the main strategies implemented included:

- a. Conducting assessments for each component of the census process and using the outcome of the assessments to accurately implement the different census phases. This ensured that the best available options were selected and implemented at every stage of census operations.
- b. Preparation of Census Enumeration Maps by demarcating the entire country into small areas down to the lowest administrative units. This ensured the widest possible coverage and avoided cases of omission or double counting during enumeration. The EAs were also useful to determine the exact numbers of personnel and quantities of materials required in each geographic area.
- c. Designing of the census questionnaires through field testing and intensive consultative processes with government ministries/departments, development partners, universities and research institutions and other data users. In addition, the United Nations international guidelines and questionnaires in similar countries were cross referenced. This ensured that the information collected from the census would be relevant to data users and conformed to the highest international standards.
- d. Preparation of field instruction manuals and training guides for trainers (master and district), supervisors and enumerators. These materials standardised the training and data collection procedures throughout the country. The training guides enhanced the interactive and inter-personal communication skills of the enumerators and enabled them to gain public confidence.
- e. Pre-testing of the entire census process exactly one year before the census, from mapping to data processing to tabulation of the results and a thorough review of the processes and outcomes. The pilot census included testing the census methodology, data collection procedures and instruments, as well as evaluating risks that had been identified around certain aspects of the census process. The results of the pilot were used to improve and tighten planning for the actual census enumeration.
- f. Preparing a comprehensive census advocacy campaign, using all appropriate channels in order to accurately inform the public about the census and to solicit their support. The campaign included consultations with national leaders, ethnic leaders and religious leaders. The publicity campaign involved national celebrities and included other channels such as the media, town hall meetings and posters in all parts of the country.
- g. Providing adequate interactive training to field staff, especially enumerators. Training experts came from Census Offices in Australia and India, as well as from UNFPA. They supported the training of master trainers who went to the States and Regions to cascade the training to field staff.
- h. Intensive supervision by the Township Census Committee members and Community Support groups in villages and wards to ensure all people were enumerated within their enumeration areas. Before enumeration began, all census EA maps and structure listing forms were updated to ensure that new

households, who had moved in to an EA after the drawing of EA maps, were captured before the census. The process also ensured that enumerators could plan their work within the census period. Two days were allocated for the updating process before the start of the enumeration, which greatly increased census coverage rates.

- i. Checking and verification of the completeness of coverage in every EA against the updated structure listing forms. This was done once the enumeration had been completed in every census enumeration area, and it was also undertaken at the ward/village tract level.
- j. Ensuring that all completed questionnaires and summary forms for every EA were accounted for and returned safely to the Census Data Processing Centre.
- k. Utilisation of the scanning technology for data capture, to minimise data operator errors and shorten the duration of the data capture process in order to release data on time.
- l. Preparation and sharing of the data release calendar with all data users; this ensured that data users were aware of what census results would be available at which point in time.

Based on the strategies and controls implemented during the census process, the 2014 MPHIC produced credible quality data, and coverage at the national and State/Region levels was reputable. The areas where enumeration could not take place constituted less than one percent of the country's land surface.

## 2. Summary of the Main Results

### 2.1. Population of Myanmar and Mandalay Region

The 2014 MPHC shows that Myanmar had a total population of 51,486,253 persons as of 29 March 2014. Of these, 24,824,586 were males and 26,661,667 were females.

The total population for Mandalay Region as of 29 March 2014 was 6,165,723 persons. Of these, 2,928,367 were males and 3,237,356 were females. The total population of Mandalay Region represents 12 percent of the total population of Myanmar. The distribution of the total population by State/Region and sex is provided in Table 1.

**Table 1: Distribution of Population by State/Region and Sex<sup>1</sup>**

<sup>1</sup> The numbers in blue provide estimates of people who were not enumerated in the census. The numbers in italics and bold provide the sum of the enumerated and the estimated population.

<sup>2</sup> The numbers in this table do not include Myanmar people living outside the country at the time of the census, except those people who were working in Myanmar diplomatic missions abroad; this population of 972 people is included in the population figure for Nay Pyi Taw.

## 2.2. Size and Change of Population in Mandalay Region

Since the 1973 census, the population of Mandalay Region has increased from 3,668,493 to 4,577,762 in the 1983 census, to 6,165,723 in the census of 2014. This means the population of Mandalay Region has increased by about 35 percent between the 1983 and the 2014 census. The population of Mandalay Region ranks third in size when compared with other States and Regions in the country, surpassed only by Yangon and Ayeyawady Regions. In terms of the proportion of the total population, the population of Mandalay Region has slightly decreased from 13 percent in 1983 to 12 percent in 2014. Figure 3 shows the proportion of each State and Region to the total population in the country.<sup>3</sup>

**Figure 3: Proportion of the population of each State/Region as a percent of the country**

## 2.3. Population Density

The population density of Mandalay Region in March 2014 was 200 persons per square kilometre. This is much higher than the Union level population density of 76 persons per square kilometre, and it means Mandalay is the second most densely populated State/Region in Myanmar, only surpassed by Yangon Region. The population density of Mandalay Region has increased from 99 persons per square kilometre in 1973 to 124 persons per square kilometre in 1983, to 200 persons per square kilometre in 2014.

<sup>3</sup> The States/Regions have been arranged in descending order of the proportion of the total population for 2014.

## 2.4. Population by Urban and Rural area

The Census results show that for every 100 persons in Mandalay Region, 65 persons live in rural areas while 35 persons live in areas that are classified as urban by GAD. At the Union level, 70 percent of the total population live in rural areas while 30 percent live in urban areas. Mandalay Region has the third largest urban population after Yangon Region (70 percent) and Kachin State (36 percent).

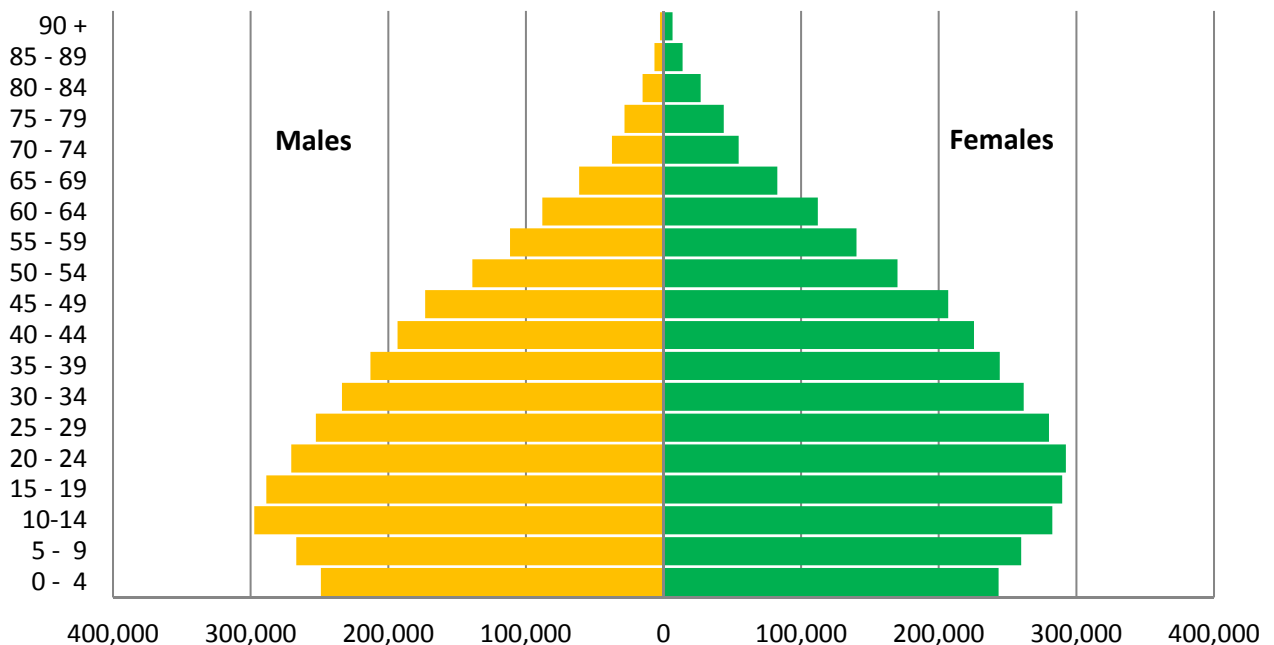

## 2.5. Population by Sex

The population of females in Mandalay Region exceeds the population of males by 308,989. The sex ratio of the population (number of males for every 100 females) is 90. This is lower than the sex ratio for the Union which is 93 males for every 100 females.

## 2.6. Population Age-sex Pyramid for Mandalay Region

The population pyramid for Mandalay Region in 2014 is pot-shaped; an almost similar shape to the population pyramid of the Union (Figure 4 and Figure 5). This shape implies a declining proportion of children in the population and a bulge in the population aged 10-29 years. The pot-shape also indicates a momentum for potential growth of the population of Mandalay Region in the next decade or two, which may necessitate the development of policies and programmes that address the socio-economic needs of the growing proportion of young people and the population as a whole.

Figure 4: Population Pyramid, Mandalay Region, 2014

**Figure 5: Population Pyramid, Myanmar, 2014**

## 2.7. Births and Childhood Deaths

There were 1,730,326 women aged 15 – 49 in Mandalay Region during the time of the census. Of these, 1,029,629 were ever married. The total fertility rate (TFR) for all women aged 15 – 49 in Mandalay Region is 1.9 children per woman, which is lower than the Union level TFR of 2.3.

The estimated number of newborns that die before reaching age 1 (Infant Mortality Rate, IMR) for Mandalay Region is 57 per 1,000 live births, which is lower than the Union level IMR of 62 deaths per 1,000 live births. The Under-5 Mortality Rate for Mandalay Region is 66 deaths per 1,000 live births, which is again lower than the Union level rate of 72.

## Annex 2: Definitions and Concepts

This section contains definitions of census terms and provides explanations which may be required to understand the census results. Most definitions contained here are based on the questions in the census questionnaires and the methodology applied in the various phases of the census process. The main concepts are detailed below.

**Population:** The population in this report corresponds to the de-facto population of Myanmar on Census Night (see below).

**Census Enumeration:** The process of visiting every household and interviewing the head of household or the most responsible member of a household in order to determine the number and characteristics of all persons and households in the country at a given time. The collection of this information is carried out through the completion of questionnaires for every conventional household and every institution.

**Census Enumeration Area (EA):** A Census Enumeration Area (EA) is a geographic unit down to the ward level in urban areas and the village tract level in rural areas, into which the whole country was divided for census purposes. For each EA an enumerator was deployed to undertake the enumeration within the census period. An EA contained on average 120 households.

**Census Night:** The night between the 29<sup>th</sup> and the 30<sup>th</sup> March 2014. Every person in Myanmar was enumerated where they spent the Census Night.

**De Facto Census:** The *de facto* census method enumerates persons at the place where they spend the Census Night. The census enumeration could also be carried out using a *de jure* approach where people are enumerated in their usual or legal place of residence. Although each approach has its own advantages and disadvantages, the *de facto* approach is easier to implement, it is closer to the reality of daily life and mitigates the possibility of omission and duplication. The 2014 MPHC was conducted based on the *de facto* approach.

**Canvasser enumeration methods:** There are two main methods of census enumeration, the canvasser and the householder approach. In the canvasser method, information for each individual or household is collected and recorded on the questionnaire by a pre-trained census enumerator. The householder method entails self-enumeration by each individual or household. Although the questionnaires are usually distributed, collected and checked by a census official, they can also be sent directly via mail or internet. The United Nations recommends that the canvasser method is more suitable for developing country populations or population groups who may find it difficult or who are unwilling to complete the census forms themselves. The canvasser method was used in the 2014 MPHC.

**Structure:** A structure is a building used for the purposes of residential, business, religious or any other activity. Only structures used for residential purposes were included in the 2014 MPHC. A structure can contain one or several housing units.

**Housing Unit/Dwelling Unit:** A housing unit is a place of abode or a residence occupied by one or more households. A housing unit must have a private entrance. As mentioned above, there can be one or several housing units within a structure.

**Conventional Household:** A conventional household includes one or more persons who are either related or unrelated and share living quarters (single quarter or compound) and meals. The household members would be eating food prepared from the same cooking pot. In most cases, there would be one person acknowledged by the household members as the head of the household.

**Institutional Household:** An institutional household is a unit where a group of people are living together but it is not a conventional household. Examples include: old-people's homes, orphanages, hospitals, boarding schools, hotels, hostels and guest houses, institutions for persons with disabilities, prisons, monasteries, convents, military and police barracks, and camps for workers.

**Head of household:** The head of a conventional household is the household member who makes key decisions and is recognised as head of the household by others. The head of household may be male or female. The person is not necessarily mainly responsible for earning the livelihood for the household. In the 2014 MPHIC, if the head of household was not present on Census Night, the next most responsible member was reported as the *de facto* head.

**Relationship to the Head of Household:** Household members are defined by their relationship to the head of household (e.g. spouse, child, sister, brother).

**Population Density:** The population density relates to the number of persons in a given administrative area to the surface of the area, expressed in square kilometres (Km<sup>2</sup>). Areas covered by water are excluded from the calculation.

**Rural area:** Areas classified by the Department of General Administration (GAD) as village tracts. Generally these are areas with low population density and a land use which is predominantly agricultural.

**Urban area:** Areas classified by the GAD as wards. Generally these areas have an increased density of building structures, population and better infrastructural development.

**Age:** Number of years a person has lived at their last birthday in reference to the Census Night. When the age was not known, interviewers were trained to use other ways of establishing the age of the respondent, including calendars of events, conversion tables, etc. The interpretation of age information is given below:

- a. The 0 (less than 1) year olds are those whose age is less than one year.
- b. The 1 year olds are those aged 1 year or more but less than 2 years.
- c. The 0-4 year age group are those aged less than 5 years.
- d. The 5-9 year age group are those aged 5 years and more but less than 10 years.
- e. The group 90+ included those aged 90 years or older.

**Marital Status:** Status of the enumerated person in relation to the institution of marriage. The marital status was described by five categories: Single/never married, married, widowed, divorced/separated and renounced.

**Disability:** Disability is a situation where a person is at a greater risk than the general population of experiencing restrictions in performing routine activities (including activities of daily living) or participating in roles (such as work) if no supportive measures are offered. The difficulties covered in the 2014 census included:

- a. **Walking difficulty** (wheel chairs, crutches, limping, problems climbing steps);
- b. **Seeing difficulty** (low vision, blind);
- c. **Hearing difficulty** (partially or completely deaf);
- d. **Mental/Intellectual difficulty** (slow learning development making it hard to compete with their counterparts at school, other mental conditions).

**Identity card:** An identity card is a document used to verify aspects of a person's personal identity. There are several types of identity cards issued by the Government of Myanmar, and national passports in the case of foreigners.

**Place of birth:** This is the administrative township which was the usual place of residence of the mother at the time of the person's birth. In the case of a person born outside Myanmar, the place of birth is the country where the person was born.

**Place of usual residence:** This is the administrative township where a person has lived for more than 6 months in the last 12 months or where she/he intends to live for more than 6 of the next 12 months.

**Place of previous residence:** This is the administrative township where a person usually lived before moving to the current place of usual residence. In cases where a person has not moved, the place of current usual residence and previous usual residence are the same.

**Duration of residence:** The number of completed years a person has lived in the township where he/she has his/her place of usual residence. This is the number of years a person has been continuously in this place without migrating to other places for long periods.

## Education

Education is the process by which people learn through instruction and teaching. The 2014 MPHC placed an emphasis on literacy skills, school attendance and educational attainment. The other categorisations used under education were:

**Literacy:** The ability to read and write in any language with reasonable understanding.

**School attendance:** The attendance at any regular educational institution or systematic instruction at any level of education during the last 12 months. This included schooling at pre-primary, primary, middle, high school and tertiary institutions of higher learning. The options were: (a) Currently attending; (b) Attended previously; (c) Never attended.

**Educational Attainment:** The highest grade/standard/diploma/degree completed within the most advanced level attended in the education system of the country where the education was received. It covered both public and private institutions accredited by government.

**Labour Force Status:** According to the type of usual economic activities during the 12 months before Census Night, all persons 10 years of age and over were classified as follows:

**Labour Force:** The Labour force is a general term covering “employed” and “unemployed” persons in the population.

**Employed:** “Employed” persons refer to those who did any work during the time of the week before the census date, or worked for more than 6 months in the 12 months before the census date for pay or profit, such as a wage, salary, allowance, business profit, etc. Also included in this category were persons working in family businesses, on a farm, in a store, in a private hospital etc., even though they were not paid any wages.

**Unemployed:** “Unemployed” persons refer to those who had no work but were able to work and actually seeking a job during the reference period, or at the time of the census enumeration.

**Not in labour force:** This category comprised persons who had no work and did not make any positive efforts to find a job during the 6 months before the census date or were unable to work. This included full time students, household work, elderly people, etc.

**Employment Status:** All employed persons were classified according to the economic activity status in the place where they worked during the last 12 months or if they worked in more than one place, where they worked most of the time. There were five employment categories:

**[1] Employee (Government):** those employed and working for government including in state organisation institutions.

**[2] Employee (Private organisation):** those employed and working for private employers or private organisations. All people in private companies, NGOs, international organisations, retail and wholesale enterprises fell under this category.

**[3] Employer:** persons who during the reference period worked in their own business, which also employed one or more other persons.

**[4] Own account worker:** self-employed persons who worked in their own business or worked in their own/family business for family gain **and did not have any employees.**

**[5] Unpaid family worker:** persons who worked in a business, farm, trade or professional enterprise operated by a member of the household/family and received no pay.

**Labour force participation rate:** The labour force participation rate is the ratio between the labour force and the overall size of the total population of the same age range. This is an important indicator as it portrays the proportion of the population that is economically active.

**Unemployment rate:** The percentage of the total labour force that is unemployed but actively seeking employment and willing to work. These are people who are without work, looking for jobs and available for work.

**Employment to population ratio:** A statistical ratio that measures the proportion of the country's working-age population (ages 15 to 64) that is employed. The International Labour Organization (ILO) states that a person is considered employed if they have worked at least 1 hour in "gainful" employment in the most recent week.

**Fertility:** Fertility measures the average number of live births per women, according to their age and marital status. In the 2014 MPHC all ever married women aged 15 years and over were asked for information relating to all their live births.

**Live Birth:** A live birth is one where the infant shows one or more of the following signs of life immediately after birth: crying or similar sounds, movement of the limbs or any other parts of the body and/or any other tangible signs of life. The census was concerned only with children born alive. Also collected was information on the last live birth of ever married female respondents.

**Sex ratio:** The number of males for every 100 females in a population.

**Total fertility rate (TFR):** The average number of children that a woman would give birth to if all women lived to the end of their childbearing years and bore children according to the current schedule of age-specific fertility rates.

**Age specific fertility rate (ASFR):** The age-specific fertility rate measures the annual number of births to women of a specified age or age group per 1,000 women in that age group. Unless otherwise specified, the reference period for the age-specific fertility rates is the calendar year.

**Dependency ratio:** The total dependency ratio is the ratio of dependents (people younger than 15 years and older than 64) to the population of working-age (age 15-64). Data are shown as the proportion of dependents per 100 working-age population. Three different measures can be calculated: total dependency ratio, child dependency ratio and old age dependency ratio.
